Georgia Institute of Technology

· DAY 2 OUTLINE · FOR THE PROGRAM OWNER

Day 2 Outline: Agentic AI with Microsoft Copilot

The second day of Applied AI at TIYA Services. Day 1 taught participants to prompt Copilot safely. Day 2 teaches them to build no-code agents with the Copilot agent builder: standing instructions, their own knowledge, and tools for one defined job. Participants test each agent before sharing it, and govern it after.

DAY 2 Wed, Oct 21, 2026 HOURS 8:30 AM – 4:30 PM TOOL Copilot agent builder

INSTRUCTORS Alex Djalali, Alex Rhodeen

1

Audience and prerequisites

- **Who:** TIYA staff in operational and administrative roles who completed Day 1. About 30 per cohort, with limited remote seats.
- **Prerequisite:** Day 1, Generative AI for Daily Work. The current cohort took Day 1 in June 2026. Day 2 opens with a 10-minute Day 1 review, and nothing later depends on a Day 1 exercise or sample.
- **Accounts:** a Microsoft 365 Copilot license, or at least Copilot Chat, with the agent builder enabled (section 5).

2

Learning outcomes

On completing Day 2, participants will be able to:

	OUTCOME	PRACTICED IN
LO1	Understand the fundamentals of AI agent creation and common agent architectures.	Agent or not? · Design canvas
LO2	Design, configure, and deploy autonomous agents using no-code and low-code tools.	Builds 1 and 2 · Build your own
LO3	Integrate reasoning, planning, tools, and memory into practical agent workflows.	Build 2 · Trigger storyboard
LO4	Apply security, privacy, safety, and trust principles when developing and deploying agentic AI.	Red-team swap · Risk tier · Governance card

3

The day, 8:30 to 4:30

About 3½ hours of building, plus design and red-team exercises. Every agent is tested before it's shared.

TIME	BLOCK	TOPICS	ACTIVITY	LO
8:30 – 10:15	**Agentic AI Foundations** 105 min	Login check · Day 1 in review: Mask → Ask → Check and the data traffic light · from chat to agent: the autonomy ladder · anatomy of an agent · the no-code ecosystem and four architectures	"Agent or not?" sort of ten TIYA tasks · agent design canvas for the participant's own work	LO1 · LO4
10:15 – 10:30	Morning break			

TIME	BLOCK	TOPICS	ACTIVITY	LO
10:30 – 12:15	**Building Real Agents** 105 min · hands-on	Prompt engineering for agents: the instructions template · tests first · knowledge Q&A and multi-tool agents	**Build 1** SOP Navigator · **Build 2** Work Order Analyst with code interpreter, numbers checked by hand	LO2 · LO3
12:15 – 1:15	Lunch			
1:15 – 3:00	**Building Real Agents, Continued** 105 min · hands-on	Event triggers as a design concept, with an instructor demo · memory · publishing: permissions, naming, sharing	Trigger storyboard · **build your own** agent from the morning's canvas · partner swap test · showcase	LO2 · LO3 · LO4
3:00 – 3:15	Afternoon break			
3:15 – 4:30	**Governance & Security** 75 min	PII handling in agents: instructions are a request, permissions are a lock · risk tiers · the agent lifecycle and model governance	Red-team swap with five attack cards · risk tier · governance card · exit checklist, evaluation, and certificates from 4:20	LO4

4

The builds

Two guided builds on fictional TIYA SOPs and work order data, then the participant's own agent. Step-by-step instructions are in the Day 2 workbook.

BUILD 1 · 10:45

SOP Navigator

- **Architecture:** knowledge Q&A
- **Knowledge:** the four sandbox SOPs
- **Teaches:** the instructions template, tests first, "I can't find that" over guessing

BUILD 2 · 11:25

Work Order Analyst

- **Architecture:** multi-tool
- **Knowledge and tools:** FM-SOP-03 plus code interpreter, with an 80-row CSV uploaded in chat
- **Teaches:** analysis with tools, and checking the numbers by hand

2:00

Build your own

- **From:** the participant's design canvas
- **Teaches:** five tests before building, partner swap test, safe publishing
- **Then:** red-teamed and governed in the last block

5

Environment requirements

Confirm each item with TIYA IT, in writing, at least 14 days before.

- [ ] Every participant has a Microsoft 365 Copilot license, or at least Copilot Chat. Licenses from the June Day 1 are still active.
- [ ] Which cloud TIYA is on (commercial, GCC, or GCC High), and that the features below are live there.
- [ ] The agent builder ("Create an agent" in Copilot Chat) is enabled for participants.
- [ ] Agent sharing to specific users is allowed.
- [ ] Code interpreter and file upload are enabled in Copilot Chat.
- [ ] An "AI Training Sandbox" SharePoint site with the four sample SOPs, readable by every participant, at least a week before.

IF COPILOT IS DOWN OR BLOCKED

The lead walks through saved build screenshots on screen, and pairs complete the design canvas and test plan on paper.

6

Assessment and certificate

- **Formative:** a six-question knowledge check, self-scored. Instructors collect anonymous per-question scores.
- **Evidence of work:** the test plan, the partner's swap-test log, the risk tier, and the governance card.
- **Certificate (proposed):** full attendance (up to 30 minutes excused), at least one agent built and tested with five tests, and a completed governance card.

7

Materials

ITEM	FOR
Day 2 slides (HTML, PowerPoint, PDF)	Instructors · participants
Day 2 workbook: Day 1 review, autonomy ladder, design canvas, two builds, test plans, governance worksheets	Participants
Day 2 agenda	Everyone
Day 2 assessment kit: certificate criteria, answer keys, knowledge check, exit checklist, evaluation	Instructors
Facilitator guide, Day 2 section: run sheet, talking points, demos, watch-fors, debriefs	Instructors
The four sandbox SOPs (Word, and on one web page)	Participants
Work order export, Aug–Sep 2026 (CSV, 80 rows)	Participants

Decisions for the program owner

1. **Outcome 2 vs. the agent builder.** LO2 promises *autonomous* agents and the agenda lists *event triggers*. The agent builder makes on-demand agents; triggers and autonomous agents need Copilot Studio, which is Day 3. Day 2 teaches triggers as a design concept with an instructor demo. Either soften LO2 ("design, configure, and deploy agents, and design event-triggered automations") or provide a Copilot Studio environment for the demo.
2. **Closing.** The agenda ends at 4:30 with no closing block. The exit checklist, evaluation, and certificates run from 4:20 inside the governance block. If the day can run to 5:00, move them to a 4:30–5:00 closing.
3. **Session headers.** The agenda's sessions are titled only "Morning" and "Afternoon". Suggested: "Agent Foundations & First Builds" and "Deploy, Trigger & Govern".
4. **Certificate criteria.** Confirm the proposal in section 6.

Day 3 Outline: Advanced Agents with Copilot Studio

The third day of Applied AI at TIYA Services. Day 2 built agents that wait for a person to ask. Day 3 builds agents that start themselves: on an incoming email, on a schedule, and by handing work to other agents. It also covers how to run them safely once no one is watching.

DAY 3 [Date TBD] HOURS 8:00 AM – 4:00 PM TOOL Microsoft Copilot Studio

INSTRUCTORS Alex Djalali, Alex Rhodeen

1

Audience and prerequisites

- **Who:** TIYA staff who completed Day 2 and will design or own agents for their team: facilities leads, the work order desk, business management, and supervisors. About 30 per cohort, with limited remote seats.
- **Prerequisite:** Day 2, Agentic AI with Microsoft Copilot. Day 3 assumes participants can write agent instructions from the template, write tests before building, and rate an agent's risk tier. It opens with a 15-minute Day 2 review and doesn't depend on any agent built on Day 2.
- **Accounts:** a Copilot Studio license and maker access to a training environment (section 5).

2

Learning outcomes

On completing Day 3, participants will be able to:

	OUTCOME	PRACTICED IN
LO1	Decide whether an agent should run on demand, on an event, or on a schedule, and design its trigger, conditions, actions, and human check.	Builds 2 and 3
LO2	Build and test event-triggered and scheduled agents in Microsoft Copilot Studio that hand their output to a person for review.	Builds 1–3
LO3	Design and build a multi-agent solution with an orchestrator and specialist agents, and judge when one agent is enough.	Build 4 · One agent or many?
LO4	Operate autonomous agents safely, including untrusted input, credentials, cost, monitoring, and a documented off switch.	Red team · Runbook · Shutdown check

3

The day, 8:00 to 4:00

About 5¼ hours at the keyboard. Every build ends with a person checking what the agent produced.

TIME	BLOCK	TOPICS	ACTIVITY	LO
8:00 – 8:30	**Welcome & Day 2 in Review** 30 min	Copilot Studio login check · the autonomy ladder, rungs 4 and 5 · what changes when no one is watching: untrusted input, real actions, real cost	Login check · show of hands on agents built since Day 2	
8:30 – 9:45	**From Agent Builder to Copilot Studio** 75 min · hands-on	A tour of Copilot Studio · tools and connectors as the way an agent acts · general-knowledge and web settings as a lock · the activity view · publishing for other agents	**Build 1** SOP Navigator, rebuilt and retested against the Day 2 tests, then published	LO2

TIME	BLOCK	TOPICS	ACTIVITY	LO
9:45 – 10:00	Morning break			
10:00 – 11:45	**Event-Triggered Agents** 105 min · hands-on	Trigger, condition, payload, action, human check · agent vs. payload instructions · the email is data, not instructions · fixed tool inputs · leaving out the send-email tool	**Build 2** Work Order Intake: eight sample emails, triage cards posted to Teams for a Facilities Lead	LO1 · LO2 · LO4
11:45 – 12:30	Lunch			
12:30 – 1:30	**Scheduled Agents** 60 min · hands-on	Scheduled prompts in Copilot Chat vs. recurrence triggers in Copilot Studio · let the flow count, let the agent write · testing on a short schedule, then turning it off	**Build 3** Monday Backlog Briefing from an Excel table, checked against the answer key	LO1 · LO2
1:30 – 2:45	**Multi-Agent Orchestration** 75 min · hands-on	Orchestrators and specialists · child vs. connected agents · descriptions drive routing · the cost of a team of agents	**Build 4** Facilities Desk with six routing tests · "One agent or many?" sort	LO3
2:45 – 3:00	Afternoon break			
3:00 – 3:45	**Operating Autonomous Agents** 45 min	Five new risks: injection, credentials, silent failure, cost, chained errors · the off switch · risk tiers for triggered agents	Red-team the intake agent with three attack emails · write its runbook	LO4
3:45 – 4:00	**Closing & Assessment** 15 min	What to propose at TIYA, and who approves it	Knowledge check · trigger shutdown check · evaluation · certificates	

4

The four builds

Each build adds one capability on top of the last, using the same fictional SOPs and work order data as Day 2. Step-by-step instructions are in the Day 3 workbook.

BUILD 1 · 8:30

SOP Navigator (Studio)

- **Rung:** 3, on-demand
- **Knowledge:** the four sandbox SOPs
- **Teaches:** the Copilot Studio workspace, settings as locks, publishing for reuse
- **Human check:** the person asking

BUILD 2 · 10:00

Work Order Intake

- **Rung:** 4, event-triggered
- **Trigger:** a new email with `[WO-TRAIN]` in the subject
- **Tools:** post to Teams, to the owner only; no send-email tool
- **Teaches:** payloads, untrusted input, tools as locks
- **Human check:** a Facilities Lead reads every card

BUILD 3 · 12:30

Monday Backlog Briefing

- **Rung:** 4, scheduled
- **Trigger:** recurrence; 5 minutes for testing, then Monday 7:00, then off
- **Tools:** read the Excel table, post to Teams
- **Teaches:** schedules, cost, checking AI arithmetic
- **Human check:** the lead verifies numbers before sharing

BUILD 4 · 1:30

Facilities Desk

- **Rung:** 5, orchestrated
- **Agents:** SOP Navigator (connected), Priority Advisor and Notice Drafter (child)
- **Teaches:** routing by description, child vs. connected, when not to split
- **Human check:** the person asking; notices are drafts

5

Environment requirements

Day 3 needs more of TIYA's tenant than Days 1 and 2 did. Confirm each item with TIYA IT, in writing, at least 14 days before.

- [ ] A Copilot Studio license for every participant and both instructors, and maker access to one training environment.
- [ ] Which cloud TIYA is on (commercial, GCC, or GCC High), and that event triggers, agent flows, and child and connected agents are available there.
- [ ] Data policies allow the Office 365 Outlook, Microsoft Teams, Excel Online (Business), and SharePoint connectors in the training environment.
- [ ] Enough Copilot Studio capacity for the day. Estimate: 30 participants × (8 inbox + 3 red-team emails + about 6 scheduled runs + about 20 test messages per build).
- [ ] The AI Training Sandbox SharePoint site from Day 2, with the four SOPs, still in place with read access for every participant.
- [ ] A plan to switch off or delete every training agent and trigger after the day.

IF COPILOT STUDIO ISN'T AVAILABLE

Run Builds 2–4 as instructor demos on screen. Participants complete the trigger canvas, triage log, routing tests, and runbook on paper from the demo output. Build 1 can run in the Copilot agent builder instead. The outcomes shift from "build" to "design and evaluate".

6

Assessment and certificate

- **Formative:** an eight-question knowledge check, self-scored. Instructors collect anonymous per-question scores.
- **Evidence of work:** the triage log from Build 2, the red-team log, and the runbook.
- **Certificate (proposed):** full attendance (up to 30 minutes excused), Build 2 run against the sample inbox, a completed runbook, and every trigger shown turned off before leaving.

7

Materials

ITEM	FOR
Day 3 slides (HTML, PowerPoint, PDF)	Instructors · participants
Day 3 workbook: Day 2 review, four builds, sample inbox, red-team log, runbook, shutdown checklist	Participants
Day 3 agenda	Everyone
Day 3 assessment kit: certificate criteria, answer keys, knowledge check, exit checklist, evaluation	Instructors
Facilitator guide, Day 3 section: run sheet, talking points, demos, watch-fors, debriefs	Instructors
Sample inbox (Word): eight request emails and three red-team emails	Participants
Work order export as an Excel table (`WorkOrders` , 80 rows)	Participants
The four sandbox SOPs, also on one web page	Participants

Decisions for the program owner

1. **Date.** Day 3 has no date yet. Every Day 3 document shows "[Date TBD]".
2. **Copilot Studio access.** Day 3 depends on it (section 5). If TIYA can't license participants, decide between instructor-demo delivery and postponing.
3. **Who attends.** Day 3 suits people who will own agents, not everyone who took Day 2. Consider a smaller cohort of 15–20.
4. **Who approves triggered agents at TIYA.** The closing asks participants to name the person who would approve a triggered agent. TIYA should name that role before the day.
5. **Certificate criteria.** Confirm the proposal in section 6.
